

Table of content

1. Gate Logic
2. Boolean logic
 - Boolean Arithmetic
3. Sequential logic
 - DFF
 - Clock
4. RAM
 - Program Counter
 - Combinational chip
5. Machine Language
6. Machine Language in HACK
 - A-instruction
 - C-instruction
7. Computer Architecture
 - Instruction Memory - ROM
 - Memory – RAM
 - Data Memory
 - Screen
 - Keyboard
 - CPU
 - Computer
8. Computer Architecture
 - CPU
 - ALU
 - Computer on-a-chip implementation
9. Assembler
 - Translating A-instruction
 - Translating C-instruction
10. Assembler
 - Label Symbols
 - Variable Symbols
 - Virtual Registers
 - I/O Pointers
 - The assembly process
11. Virtual Machine I: Stack Arithmetic
 - Evaluation of arithmetic expressions
 - Evaluation of Boolean expressions
12. Virtual Machine Programming
13. Virtual Machine II: Program Control
 - Flow Control Implementation
 - Function Implementation
14. Virtual Machine
 - The function-call-and-return: VM View
 - Implementing the return command
 - Bootstrapping

15. The Jack programming language
 - Simple object oriented language
 - No inheritance
 - Very easy to parse (compile)
 - Very easy to learn
16. Compiler I
 - Syntax Analysis
17. Compiler II
 - The Jack grammar
 - The Jack Tokeniser
 - The Jack Parser
18. Compiler II: Code generation
19. Compiler II: Code generation
20. Operating Systems
